- Based on our log analysis, the attack began with the creation of a user account named “*server\$”.

In the previous blog post', security researchers detailed the stages of one real-world attack campaign that began with a brute force attack detected by Security Center and the steps taken to investigate and remediate the attack.. In our investigations, we've seen bitcoin miners installed through a variety of techniques including malicious downloads, emails with malicious links, attachments downloaded by already-installed malware, peer to peer file sharing networks, and through cracked installers/bundlers.. Mining software is often flagged as malicious because it hijacks system hardware resources like the Central Processing Unit (CPU) or Graphics Processing Unit (GPU) as well as network bandwidth of an affected host.. exe“ being launched with cryptonight related parameters • Note: The ' bond007.. Azure Security Center helps customers deal with myriads of threats using advanced analytics backed by global threat intelligence.

In this post, we'll focus on an Azure Security Center detection that led researchers to discover a ring of mining activity, which made use of a well-known bitcoin mining algorithm named Cryptonight.. Initial Azure Security Center alert details Our initial investigation started when Azure Security Center detected suspicious process execution and created an alert like the one below.

We suspect one of the administrators on the box was trying to download tools that are usually used to patch or 'crack' some software keys.. "Bitcoin Miners" are a special class of software that use mining algorithms to generate or "mine" bitcoins, which are a form of digital currency.. We began a deeper investigation, which revealed the initial compromise was through a suspicious download that got detected as "HackTool: Win32/Keygen".. The alert provided details such as date and time of the detected activity, affected resources, subscription information, and included a link to a detailed report about hacker tools like the one detected in this case.. [com/2017/12/19/seg-wit2x-old-new-bitcoin](#) This timeline is March 22, 2017 Advantages of Bitcoin Cloud Mining.. In addition, a team of security researchers often work directly with customers to gain insight into security incidents affecting Microsoft Azure customers, with the goal of constantly improving Security Center detection and alerting capabilities.. Malware is frequently installed along with these tools allowing attackers a backdoor and access to the box.. Bitcoins Mining updated their cover photo March 11, 2017 Cryptonight is one such mining algorithm which relies specifically on the host's CPU. 6e4e936fe3 [Intel I752 Video Driver Download](#)
